Profile

I'm a self-motivated, hardworking man with a huge passion for Data Science and football, with a drive for continuous improvement and an ambition to fulfil a career that enables development of technical and interpersonal skills.

Currently I'm working as freelance data scientist in the field of football, writing articles for my blogs and I'm also collaborating with football consultant Proscout, producing scouting reports.

As I love to develop and apply my skills to tackle interesting problems and draw meaningful insights from data, I'm looking for an opportunity where I can apply data science assisting enterprises by supporting data-driven decision-making and I believe that this position can be the perfect fit for both sides.

Profissional Experience
